Reliable and powerful modules
for parcel handling systems
Made by TRANSNORM

Global
Excellence for
Parcel

Global Excellence by TRANSNORM

DELIVERING HIGH PERFORMANCE MODULES & FUTURE-PROOF SMART SOLUTIONS

FUNCTION OVERVIEW
TRANSNORM & SOVEX modules are trusted worldwide by blue-chip Post & Parcel providers

As a producer of conveyor equipment modules and solutions, TRANSNORM has been a reliable partner for system integrators and end customers for more 50 years. Asking and listening and our experience in the industry form the basis of this cooperation. The results are solutions that assure you of the necessary edge in day-today competition.

Now along with Group company SOVEX, the Parcel industry portfolio covers more common functions such as vehicle loading and unloading solutions, namely the patented Bendy Boom telescopic conveyor.

Global Excellence for Parcel

In order for Parcel facilities to run optimally, many factors must be considered. TRANSNORM's modules encompass the functions synonymous at Posts, regardless of their size. We continue to work in close collaboration with blue-chip Parcel providers leading to the innovation of numerous game changing developments.

Both belt and roller sortation modules cover timing, alignment, merging, sorting and linesplitting functions. These modules are scalable and standardised to work seamlessly in unison – making a real-world difference in terms of productivity and efficiency. This applies to sites from smaller express centres dealing with 2,000 parcels/hour to larger distribution centres and hubs processing over 50,000 parcels/hour.

It is with this performance and track record we are trusted worldwide to deliver modules and smart, future-proof solutions which satisfy every time in terms of quality and reliability.

As Parcel companies continue to push the envelope for their customers, challenges arise. The latest answer to this challenge is the TRANSNORM Sorting Modules (TSM) initiative, enabling a degree of sortation even at smaller sites without the need for a sorter, meaning more can be done with less and facilities can be more agile, flexible and dynamic with their operation.

Furthermore, TRANSNORM Singulation Concept (TSC) makes the idea of bulk unloading and greater levels of automation a reality. This latest next technological advancement and the future standard in Parcel handling combines SOVEX & TRANSNORM modules to allow the sorting capacity of a system to be fully maximised.

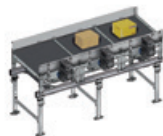

CURVE CONVEYING
TRANSNORM Belt Curves – Robust and Reliable

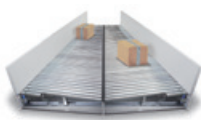

CONTINUOUS VERTICAL CONVEYING
TRANSNORM Helix Curves – Two functions, one conveyor, full speed

MERGING/DISTRIBUTING 30°/45°
TRANSNORM Strip Belt Conveyors – Reliable and Accurate

TIMING
TRANSNORM Timing Conveyors – Accurate and Forceful

MERGING CONVEYING LINES
TRANSNORM RollerMerge – Contactless merging with high speed

HORIZONTAL/GRADIENT CONVEYING
TRANSNORM Belt Conveyors for junctions in parcel distribution centres

LINE SPLITTING
TRANSNORM SmartSort® LineSplitter – Dividing lines reliably with high speed

ALIGNING LOADS TO ONE SIDE
TRANSNORM Align Conveyors – Aligning parcels laterally and gently

CENTERING LOADS
TRANSNORM Centring Conveyors – Centre parcels gently with high performance

VERTICAL DISTRIBUTION/MERGE
TRANSNORM VertiSwitch® – Compact and Powerful

VEHICLE LOADING/UNLOADING
SOVEX Booms – Robust, Reversible and Reliable

FLEXIBLE VEHICLE LOADING/UNLOADING
SOVEX Bendy Boom – Agile and Ergonomic

GRAVITY VEHICLE LOADING
SOVEX Roller Booms – Simple, Energy and Cost-effective
